Project Name: Simultaneous Exchange

Test Case ID: merge_right

Test Designed by: Peter

Test Priority (Low/Medium/High): high
Test Designed date: 25/04

Module Name: Merge Timelines

Test Executed by: Mathilde, Peter

Test Title: Merge timelines by keeping the "right" timeline and dropping the "left" timeline.
Test Execution date: 06/05

Description: During a scenario and if two timelines are active ("left" timeline and "right" timeline), the user can delete the "left" timeline and return to a situation with one active timeline (the "center" timeline, which is identical to the previous "right" timeline).

Objective: Checks that the system copies information from the "right" timeline to the "center" timeline and that the "center" timeline is activated (and displayed to the user) while the other two timelines are deactivated (and hidden from the user).

Pre-conditions: A scenario is currently in progress.

Step	Test Steps	Test Data	Expected Result	Actual Result	Status (Pass/Fail)	Notes
1	Click on "Drop Timeline" button on the "left" timeline	N/A	The system copies information from the "right" timeline to the "center" timeline and the "center" timeline is activated (and displayed to the user) while the other two timelines are deactivated (and hidden from the user)	Works as expected	Pass	N/A

Post-conditions: The user can continue to play in the scenario with only one active timeline. They have the possibility to split their timeline again.
